

Hydraulic Rubber Processing Unit

This rubber machinery unit features a robust construction with a metallic grey base housing a hydraulic system. An electric motor powers a pump assembly equipped with a pressure gauge for monitoring system performance.

Product Overview

Industrial Hydraulic Rubber Processing Unit

This high-performance hydraulic rubber processing unit is engineered for demanding industrial environments. It features a robust metallic grey base housing a precision hydraulic system, complemented by a horizontally mounted green fluid reservoir. Designed for reliability, the unit integrates an efficient electric motor and pump assembly, ensuring optimal fluid circulation for rubber processing applications.

Technical Specifications

Core Components

- Electric motor drive
- Hydraulic pump assembly
- Pressure monitoring gauge
- Integrated fluid reservoir
- Copper circulation tubing

Performance Monitoring

Pressure Gauge, Hydraulic System, Fluid Circulation Control

Construction and Design

Build Features

Metallic Grey Base • Industrial Grade • Robust Construction
