

Hydraulic Scrap Metal Shear

This hydraulic scrap metal shear efficiently processes metal. Its robust hydraulic system provides powerful cutting action, and a material support table ensures precise alignment and feeding.

Overview

Industrial Hydraulic Scrap Shear

This heavy-duty hydraulic scrap shearing machine is engineered for high-efficiency metal processing in industrial recycling and fabrication environments. It features a robust hydraulic system to ensure powerful, consistent cutting performance. Equipped with a material support table and integrated guide system, it allows for precise metal alignment and safe, reliable feeding during operation.

Technical Features

Key Components

- Robust hydraulic system
- Material support table
- Multi-guide feeding system
- Integrated hydraulic pressure gauge
- Operator control panel

Applications

Industrial Recycling, Metal Fabrication, Scrap Metal Processing
