

Hydraulic Shock Absorber for Vehicle Suspension

This hydraulic damping device is designed to control vehicle suspension movement and improve ride quality. It features durable steel construction with a protective finish ensuring resistance to corrosion and wear.

Product Overview

Hydraulic Damping Performance

The 990 Shock Absorber is a high-performance hydraulic damping device engineered to control vehicle suspension movement and significantly improve ride quality. Constructed with durable steel and a protective finish, it offers excellent resistance to corrosion and wear, ensuring longevity in diverse operating conditions. By reducing body roll and enhancing handling, this component provides a reliable solution for vehicle stability and driver comfort.

Technical Specifications

Material Composition	Durable Steel
Surface Finish	Corrosion-resistant protective coating
Damping Mechanism	Hydraulic

Key Features

Performance Benefits

- Consistent damping performance
- Reduced body roll
- Improved vehicle handling
- Enhanced ride comfort

Engineering Quality	Precision-machined, Wear-resistant, Corrosion-resistant
