

Hydraulic Single Drum Vibratory Roller

This construction machine is designed for soil compaction and asphalt paving applications. Its single smooth drum applies pressure and vibration to the surface.

Overview

High-Performance Vibratory Roller

This hydraulic single drum vibratory roller is engineered for demanding soil compaction and asphalt paving tasks. Featuring a powerful turbocharged diesel engine and high-quality hydraulic components, it ensures reliable, consistent performance across various road construction projects. The machine is designed with operator comfort in mind, offering a spacious, sound-insulated cabin and intuitive controls for precise handling.

Technical Specifications

Operating Weight	20000 kg
Vibration Amplitudes	2
Braking System	Three-stage braking system

Key Features

Cabin Features

- Sound insulation
- Thermal insulation
- Vibration reduction
- Wide field of vision

Engine Type	Turbocharged diesel engine
Drive System	Front/Rear Drive, Continuous Travel Speed Control

Options

Available Options

Pad-foot drum • Air-conditioner
