

Hydraulic System Components with Cuboid Heads

These hydraulic components are designed for machinery and industrial applications within hydraulic systems. Each component features a cuboid-shaped head mounted atop a rectangular column, with different interfaces.

Product Overview

High-Performance Hydraulic Components

These hydraulic system components feature distinctive cuboid head designs, engineered for precision and reliability in industrial machinery. Each unit is constructed with a robust rectangular column base, ensuring stability during operation. The set includes varied interface configurations, making them versatile solutions for complex hydraulic systems requiring specific functional connections.

Technical Specifications

Design Features	Cuboid Head, Rectangular Column, Industrial Grade
Finish	Orange
Application	Hydraulic Machinery
Set Composition	3 units
