

Hydraulic System Parts

These parts are essential for maintaining and repairing hydraulic systems. They facilitate the control and transfer of fluid power within machinery.

Product Overview

Professional Blind Rivet Fastening Solution

This blind rivet, also known as a pop rivet, is a high-performance fastener engineered for joining multiple materials securely. Designed for applications where access to the rear of the joint is restricted, the rivet utilizes a setting mandrel to expand the body and create a permanent, vibration-resistant connection. It is an essential component for assembly tasks requiring reliable, one-sided installation.

Technical Details

Fastener Type	Blind Rivet (Pop Rivet)
Installation Method	Mandrel pull-through with specialized setting tool
Joint Characteristics	Permanent, Secure, Vibration-resistant

Usage

Primary Applications

- Limited access joints
- One-sided assembly
- Material joining where back access is unavailable
