

Hydraulic Toe Jack

Hydraulic toe jacks have two lifting points: the head and the toe. The head can lift twice the capacity of the toe.

Product Overview

Versatile Lifting Solution

This hydraulic toe jack is engineered for lifting heavy loads in environments with minimal ground clearance, where standard jacks cannot reach. Designed for versatility, it features both a head and a toe lifting point, making it suitable for machinery installation, bridge construction, and railway maintenance. With a robust steel construction and integrated safety features like an overload protection valve, it provides a stable and reliable solution for professional heavy-duty lifting tasks.

Technical Specifications

Capacity & Models

Model	Capacity
MHC-5	5 Ton
MHC-10	10 Ton
MHC-20	20 Ton
MHC-30	30 Ton
MHC-50	50 Ton
MHC-100	100 Ton

Lifting Points

2 x

Head/Toe Capacity Ratio

Features

Key Features

- Low-profile toe for minimal clearance access
- Overload protection valve for safety
- 360-degree swiveling feet for difficult-to-reach loads
- Adjustable toe height (3 positions)
- Dual lifting points (Head and Toe)

Common Applications

Machinery Installation, Bridge Construction, Railway Maintenance, Equipment Maintenance
