

Hydraulic Toe Jack for Low Clearance Lifting

This hydraulic toe jack is designed for lifting heavy loads with minimal ground clearance. Its robust construction and adjustable toe make it suitable for various industrial applications, including machinery installation and maintenance.

ADDITIONAL IMAGES

Product Overview

Versatile Low Clearance Lifting Solution

This hydraulic toe jack is engineered for precision lifting in confined spaces where standard jacks cannot fit. Featuring a robust welded steel construction with heat-treated components, it provides reliable performance for heavy-duty industrial applications. The unit offers 360-degree handle rotation for flexible operation and is designed to handle lifting, pushing, spreading, bending, and pressing tasks with ease.

Technical Specifications

Lifting Capacity

10 Ton
Capacity

Physical Specifications

Metric	Value
Net Weight	29 kg
Oil Capacity	0.35 Liters

Features & Capabilities

Key Features

- Super low height for tight clearance
- Welded steel construction
- 360-degree swiveling pumping socket
- Heat-treated components to reduce metal fatigue
- Integrated safety valve to prevent overloading

Applications

Lifting, Pushing, Spreading, Bending, Pressing, Machinery Installation, Equipment Maintenance
