

Hydraulic Toe Jack for Low Clearance Lifting

Hydraulic toe jacks lift heavy loads in areas with limited space. The toe design allows engagement from a low position, ideal for machinery installation and maintenance.

Product Overview

Versatile Lifting for Confined Spaces

This hydraulic toe jack is engineered for lifting heavy loads in environments with minimal ground clearance, such as machinery installation, shipbuilding, and construction. Featuring a dual-purpose design, it supports lifting from both the toe and the top head, providing flexibility for various load heights. Built with heat-treated, corrosion-resistant components and integrated overload protection, it ensures reliable and safe operation in demanding industrial conditions.

Technical Specifications

Lifting Capacity Range

2.5 ton

Minimum Capacity

50 ton

Maximum Capacity

Operational Orientation

Horizontal, Vertical

Features & Durability

Core Features

- Overload protection valve
- Heat-treated piston
- Corrosion-resistant construction
- Dual-purpose lifting points
- Stable performance across temperature fluctuations

Industrial Applications

Best Suited For

Machinery Installation, House Moving, Shipyards, Bridge Building, Plant Construction, Heavy Equipment Transport
