

Hydraulic Toe Jack for Machinery Lifting

This hydraulic toe jack features a low-profile toe for operation in confined spaces. Its hydraulic system ensures smooth, controlled lifting for heavy machinery.

Product Overview

Professional Hydraulic Toe Jack

This hydraulic toe jack is an essential tool designed for heavy machinery lifting, particularly in mining, rail transposition, and industrial maintenance. Engineered with a low-profile lifting toe, it allows for operation in confined spaces with minimal ground clearance. The unit features robust alloy steel construction for durability and includes an integrated overload protection valve to ensure safe and reliable performance.

Technical Specifications

Lifting Points

- Toe
- Head

Material

Alloy Steel

Safety & Features

Key Operational Benefits

- Quick and simple manual operation
- Low height lifting toe for confined areas
- Adjustable toe height
- High output delivery system

Safety Mechanisms

Overload Protection Valve, Stable Support, High Strength

Application

Primary Applications

Mining Service • Rail Transposition • Industrial Maintenance • Machinery Installation
