

Hydraulic Underground Drill Rig

This hydraulic underground drill rig is designed for efficient drilling in underground environments. It features a hydraulic drive system with top-drive head rotation, feed, and hoist powered by a ration pump and motor.

Product Overview

High-Performance Underground Drilling

This hydraulic underground drill rig features a newly-designed structure engineered for versatility and efficiency in demanding environments. It utilizes a top-drive head with an oil motor to provide three distinct speeds, allowing operators to adapt quickly to various drilling technologies. Designed with portability in mind, the unit is lightweight and easy to re-assemble, making it an ideal solution for drilling operations in tunnels and on frames.

Technical Capabilities

Drilling Speeds	3 levels
Drive System	Top-drive head with oil motor

Design & Usability

Key Features	Lightweight, Easy to Move, Easy to Maintain, Modular Assembly
--------------	---

Applications

Suitable Environments

- Tunnel drilling
- Frame-based drilling
- Underground mining
- Underground construction
