

# Hydraulic Valve for Heavy Machinery

This hydraulic valve is suitable for use in heavy machinery such as loaders, excavators, and bulldozers. It features multiple ports, fittings, and electrical connections for solenoid operation in high-pressure hydraulic systems.

## Product Overview

### High-Performance Hydraulic Control

This robust hydraulic valve is engineered for demanding heavy machinery applications, including loaders, excavators, and bulldozers. Designed for high-pressure hydraulic systems, it features an integrated solenoid-operated mechanism that allows for precise remote control. The durable construction ensures reliable performance in rigorous industrial environments.

## Technical Specifications

### Design Features

- High-pressure hydraulic system compatibility
- Multiple connection ports and fittings
- Integrated electrical solenoid interface
- Durable red-painted exterior finish

<b>Component Type</b>	Hydraulic Valve / Actuator
<b>Compatible Machinery</b>	Loaders, Excavators, Bulldozers
<b>Operation Method</b>	Solenoid-operated (Electrically controlled)
