

Hydroelectric Power Station

This power station utilizes the force of water to generate electricity. The complex includes a dam that spans a river, creating a reservoir and housing the power plant facilities.

Overview

Comprehensive Hydroelectric Solutions

This hydroelectric power station offering encompasses a complete set of equipment supply and technical instruction services. With a proven track record in both turnkey projects and equipment supply, these solutions have been successfully deployed in diverse international markets including Iran, Pakistan, and Vietnam. The systems are designed for large-scale energy generation, supporting significant capacity requirements.
