

Hydrogen Fuel Cell Power System with AC Outlets and USB Ports

This hydrogen fuel cell power system uses hydrogen as fuel to generate power. It provides a clean, efficient alternative to traditional generators, producing electricity with only water vapor as emissions.

Overview

Clean Energy Generation

This hydrogen fuel cell power system serves as a clean, efficient alternative to traditional generators, producing electricity with zero emissions aside from water vapor. Housed in a rugged, camouflage-patterned enclosure, the unit is built for durability and ease of transport. It is an ideal solution for remote power requirements or reliable backup energy needs.

Key Features

Output Interfaces

- Dual AC power outlets
- Integrated USB ports

Monitoring

Yes

Design & Construction

Enclosure Design

Rugged, Camouflage Pattern, Portable

Mobility Features

Equipped with heavy-duty casters for easy maneuverability

Technical Details

Emissions

Zero Emissions • Water Vapor Only

Model Identifier

NSC215

Fuel Source

Hydrogen
