

Ice Cream Mixing Paddle

This stainless steel stir bar is designed for ice cream making and similar mixing tasks. Its design features a central shaft connected to two parallel, flat bars for efficient ingredient mixing and scraping.

Product Overview

Professional Mixing Solution

This stainless steel stir bar is engineered for efficient mixing and scraping in ice cream production and similar culinary applications. Its robust construction features a central cylindrical shaft connected to parallel, flat bars, ensuring consistent ingredient blending. Designed for durability and hygiene, it is an essential tool for maintaining high standards in commercial food processing environments.

Technical Details

Design Features

- Central cylindrical shaft
- Dual parallel flat bars
- Angled support structure
- Scraping-optimized geometry

Product Number	SPJX003
Material	Stainless Steel, Food-Grade
