

# ICU Ventilator with Multiple Ventilation Modes

This ventilator allows clinicians to quickly and easily set and deliver ventilation therapies through its intelligent ergonomic design and user interface. It features over 15 pre-set ventilation modes and optional auxiliaries.

## Product Overview

### Advanced Clinical Ventilation

This high-performance ICU ventilator is designed for critical care environments, offering a wide array of ventilation therapies suitable for adult, pediatric, and neonatal patients. The system prioritizes clinician efficiency through an ergonomic, intelligent touchscreen interface and over 15 pre-set ventilation modes. With integrated oxygen blending, comprehensive alarm systems, and battery backup, it ensures reliability and precise respiratory support for diverse clinical needs.

## Technical Specifications

### Ventilation Modes

- Volume Control
- Pressure Control
- SIMV
- CPAP
- 15+ Pre-set Modes

### Patient Compatibility

Adult, Pediatric, Neonatal

## Design and Connectivity

### User Interface

High-resolution touchscreen • Ergonomic design • Flat user interface

### Mobility

- Mobile stand
- Locking casters

### Reliability Metrics

**1 Included**

Battery Backup
