

Idler Arm for Toyota Vehicles

This idler arm is designed for the steering and suspension systems of Toyota vehicles. It ensures reliable steering performance and contributes to vehicle control.

Overview

Steering System Precision

This idler arm is a critical component of the steering linkage system, engineered specifically for Toyota vehicle applications. It plays a vital role in maintaining precise steering geometry and ensuring reliable handling performance under various driving conditions. Built to rigorous quality standards, this part offers durability and consistent operation for heavy-duty steering requirements.

Technical Specifications

Part Number	45490-29305
Compatible Vehicle Make	Toyota
System Type	Steering Suspension

Certifications

Quality Certifications	ISO9001
