

IEC61032 Test Probe

This sphere verifies the protection degree of enclosures against solid foreign objects with a diameter of 12.5 mm or greater. It is designed to ensure that hazardous parts are inaccessible.

Overview

Precision Safety Testing

The IEC61032 Test Probe is a precision-engineered instrument specifically designed for evaluating the safety of electrical enclosures. This probe ensures that hazardous internal parts are inaccessible to users, effectively preventing potential electrical shock or injury. Built for durability and accuracy, it is an essential tool for manufacturers and testing laboratories to verify product compliance with international safety regulations.

Technical Specifications

Key Features

- Smooth surface finish
- Precise dimensional accuracy
- Repeatable testing performance

Standard Compliance	IEC 61032
Probe Diameter	12.5 mm
Primary Application	Verification of protection against ingress of solid foreign objects
