

IGBT DC Inverter Arc Welding Machine

This heavy-duty IGBT DC inverter arc welding machine is designed for professional welding applications. It features adjustable current and voltage settings, thermal overload protection, and a robust construction for reliable performance.

Product Overview

Professional IGBT Arc Welding Solution

This heavy-duty IGBT DC inverter arc welding machine is engineered for professional-grade performance in demanding industrial environments. Designed specifically for MMA and SMAW welding processes, the unit provides consistent power delivery and reliable arc stability. It features integrated thermal overload protection and robust construction to ensure safety and longevity during intensive welding operations.

Technical Specifications

Safety Features

- Thermal overload protection
- Robust industrial casing

Welding Process	MMA, SMAW, DC Inverter
Model Number	ZXT-500
Power Technology	IGBT Inverter

Performance Metrics

Core Operational Metrics

500 A

Rated Capacity
