

IGBT Inverter Arc Welding Machine

This fast inverter arc welding machine is designed for industrial applications. It features IGBT technology for efficient and reliable performance.

Product Overview

Industrial Arc Welding Capability

This advanced inverter arc welding machine utilizes IGBT technology to deliver efficient and reliable performance across various industrial welding tasks. Designed for precision, it offers enhanced control over critical welding parameters to ensure high-quality joints. The robust construction is engineered to support demanding professional applications.

Technical Specifications

Max Welding Current

400 A

Current Output

Model Identifier	ZX7-400IGBT-II
Core Technology	IGBT Inverter
Key Indicators	Low voltage protection, Overload protection, Power indicator, Precision current control
