

IGBT Inverter DC Arc Welding Machine

This IGBT inverter DC arc welding machine is designed for efficient and precise welding. Adjustable settings allow optimal control over the welding process.

Overview

Professional Performance

The ZXT-500 is a high-performance IGBT inverter DC arc welding machine engineered for precision and efficiency in demanding work environments. Its robust construction ensures long-term durability, while the adjustable settings provide operators with optimal control over the welding process. Designed for portability and ease of use, this unit comes ready for immediate operation with standard welding cables and connectors included.

Technical Specifications

Technology

IGBT Inverter • DC Arc

Key Performance Metrics

500 A

Max Output Current

Model

ZXT-500

Features

Included Components

- Welding cables
- Connectors

Design Highlights

Portable, Adjustable Settings, Robust Construction
