

# Imboulu Hydropower Station

The Imboulu Hydropower Station is a power generation facility situated in Congo (Brazzaville). It incorporates a dam structure, power generation infrastructure, and water diversion mechanisms.

## Project Overview

### Imboulu Hydropower Station

The Imboulu Hydropower Station is a significant infrastructure project located in Congo (Brazzaville). This facility integrates advanced dam architecture with robust power generation capabilities to harness water resources efficiently. The site features a comprehensive design encompassing a main building complex, a durable dam spanning the river, and a strategically engineered discharge channel for effective water management.

## Infrastructure Details

### Core Components

- Main building complex
- Dam structure
- Curved spillway
- Water diversion mechanisms

### Setting

Congo (Brazzaville), Forested Environment, Riverine Location
