

Immersion Heater Element

This immersion heater element is designed for heating liquids. It is constructed from a corrosion-resistant metal alloy and features a mounting flange for easy installation.

Product Overview

High-Performance Immersion Heating

This immersion heater element is designed for efficient liquid heating across a variety of demanding industrial applications. Engineered with a corrosion-resistant metal alloy, the tubular design ensures optimal heat distribution and long-term durability. It features a standardized mounting flange with integrated electrical terminals, allowing for seamless installation in water heaters, boilers, and industrial heating systems.

Technical Specifications

Material	Corrosion-resistant metal alloy
Design	Tubular heating element
Mounting	Flange mount

Applications

Primary Applications

- Water heaters
- Industrial boilers
- General industrial heating systems

Features

Key Features	Corrosion-resistant, Tubular design, Easy installation, Industrial grade
