

Immersion Heater Element

This immersion heater element features a multi-loop design for efficient heat transfer. It is constructed from a corrosion-resistant metallic alloy, suitable for prolonged use in high-temperature environments.

Product Overview

High-Performance Immersion Heater

This immersion heater element is engineered for reliable performance in demanding industrial environments. Featuring a robust multi-loop design constructed from a specialized metallic alloy, it ensures efficient heat transfer and consistent thermal output. The unit is built to withstand high-temperature conditions and offers excellent corrosion resistance, making it an ideal solution for water heaters, boilers, and various industrial heating systems.

Technical Specifications

Material Composition	Metallic Alloy
Design Features	Multi-loop design, Corrosion-resistant, High-temperature compatible

Installation & Compatibility

Typical Applications

- Water heaters
- Industrial boilers
- General industrial heating

Mounting Method	Threaded base
