

Immersion Water Heater Element

This immersion heating element is designed for water heating applications. It features a tubular heating element with a looped design, constructed from corrosion-resistant stainless steel.

Product Overview

High-Efficiency Immersion Heating

This immersion water heater element is engineered for reliable performance in water heating applications. Constructed with corrosion-resistant materials and a robust tubular design, it ensures longevity and consistent heat transfer. The unit features a threaded mounting base for secure installation and is designed for seamless integration into boilers and various heating appliances.

Technical Specifications

Power Output

1200 W

Minimum Power

3000 W

Maximum Power

Installation Details

- Threaded mounting base
- Three-point electrical connection
- Orange terminal block

Voltage Range

220-240V

Construction Features

Corrosion-Resistant, Stainless Steel, Tubular Design
