

Immersion Water Heating Element

Immersion heater element designed for heating water in various applications. The element features a tubular heating element with a rounded end for efficient heat transfer and is supported by a mounting flange.

Product Overview

Immersion Water Heating Element

This immersion water heating element is designed for reliable and efficient performance in demanding liquid heating applications. Engineered with a corrosion-resistant SUS304 stainless steel sheath, it ensures longevity even when exposed to water-based environments. Featuring a powerful 3X3000W configuration at 230V, this heating solution is ideal for high-capacity boilers and industrial water heating systems.

Technical Specifications

Electrical Ratings

230 V

Voltage

3000 W

Power per element

Part Number	SHM22483
Construction Materials	SUS304 Stainless Steel, OCr25Al5 Resistance Wire

Logistics

Quantity per Carton	10 PCS
