

# Immersion Water Heating Element with Flange

This immersion heating element is designed for water heating applications. It features a square flange with four mounting holes and dual U-shaped heating rods for efficient heat transfer.

## Product Overview

### High-Efficiency Immersion Heating

This immersion water heating element is engineered for reliable and efficient thermal transfer in liquid heating applications. Featuring a robust square flange mounting system with four secure installation points, it ensures stability and durability. The dual U-shaped rod design maximizes surface area contact with the medium, promoting rapid and consistent heating performance.

## Technical Specifications

Mounting Configuration	Square Flange
Mounting Holes	4
Heating Rod Design	Dual U-shaped
Construction Material	Durable Metal

## Features

### Key Performance Benefits

- Efficient heat transfer
- Secure flange installation
- Durable construction for longevity

Primary Application	Water Heating, Industrial Liquid Heating
