

# In-Mold Labels for Plastic Containers

In-mold labels are applied during the manufacturing of plastic containers, becoming an integral part of the final product. This results in a durable and visually appealing finish that enhances product aesthetics.

## ADDITIONAL IMAGES

## Product Overview

### Advanced Decoration Technology

In-mold labeling is a sophisticated pre-decoration process where a pre-printed label is placed inside the mold before plastic injection. During the manufacturing process, the molten plastic bonds with the label, making it an integral, permanent part of the final container. This method provides superior durability, tamper evidence, and high-quality graphics that are resistant to wear and tear.

## Technical Specifications

### Safety Standards

Non-toxic • International Standard Compliant

### Printing Capability

8-color patterns in a single process

## Compatibility

### Compatible Materials

ABS, AS, PS, PP, Bamboo, Wood, Metalwork

## Dimensions

### Available Dimensions

- 160 mm
- 200 mm
- 260 mm
