

# Independent Suspension Chassis System with Disc Brakes

This chassis system features independent suspension with coil-over shocks and disc brakes. It is designed for enhanced handling and stability, including axles and related components for a complete assembly.

## ADDITIONAL IMAGES

## Overview

### High-Performance Independent Suspension Chassis

This advanced chassis system is engineered for modern vehicles requiring superior handling and ride comfort. Featuring an independent suspension setup with coil-over shocks and integrated disc brakes, it provides precise control and stability across various driving conditions. The complete assembly is designed for durability and high-performance automotive applications.

## Suspension System

### Suspension Type

Independent Suspension • Coil-Over

### Damping Components

- Coil springs
- Shock absorbers
- Stabilizer bar

## Braking & Control

### Braking System

Disc brakes with high-visibility red calipers

### Control Components

Steering Components, Axles, Suspension Linkages

## Performance & Build

### Key Performance Benefits

- Enhanced handling and stability
- Optimal ride comfort
- Precise control
- High-performance engineering

### Build Quality

Designed for durability under various driving conditions
