

Indoor Gas Water Heater

This water heater is designed for household use and indoor installation. It is gas-powered, providing hot water through inlet and outlet pipes.

Product Overview

High-Efficiency Indoor Gas Water Heater

This indoor gas water heater is engineered for reliable residential hot water supply, featuring a robust 10-liter capacity suitable for daily household needs. The unit utilizes a forced-exhaust design to ensure safe operation, provided it is installed in compliance with ventilation requirements. Equipped with precise temperature controls, it offers a consistent heating experience while maintaining safety standards for indoor environments.

Technical Specifications

Capacity

10 L

Water Output

Installation Requirements
