

Indoor Vertical Garden Atrium

This indoor vertical garden atrium integrates environmental art with architectural technology. It features cascading greenery and natural light to create a calming and visually appealing interior space.

Product Overview

Biophilic Indoor Atrium Design

This indoor vertical garden atrium solution integrates nature into architectural spaces, blending environmental art with modern interior design. The system is engineered to foster a calming, natural atmosphere through cascading greenery and thoughtful landscape elements. By utilizing biophilic design principles, it enhances the quality of living environments while serving as a functional, aesthetically pleasing focal point for commercial or civil interiors.

Design Capabilities

Project Methodology

- Conceptual Planning
- Construction Drawing Development
- Field Construction Management
- Technical Research & Detailing

Integrated Design Fields

Interior Design, Landscape Design, Acoustic Design, Environmental Art

Key Features

Core Design Benefits

Biophilic Architecture • Natural Light Integration • Multi-story Cascading Greenery • Relaxation & Social Zones
