

Indoor VHF/UHF Telescopic Antenna

This indoor antenna receives both UHF and VHF signals, enhancing over-the-air broadcast reception. Telescopic antennas allow for optimal signal adjustment, and a tuning knob enables fine-tuning of frequencies.

Product Overview

High-Performance Indoor Signal Reception

This indoor antenna is specifically designed for receiving UHF and VHF signals, effectively enhancing your over-the-air broadcast reception. It features adjustable telescopic rods for optimal signal orientation and a dedicated tuning knob for precise frequency fine-tuning. Its compact, tabletop-ready form factor makes it a perfect, space-saving solution for improving television signal quality without requiring complex external installations.

Technical Specifications

Frequency Bands	VHF, UHF
Tuning Control	Integrated frequency tuning knob

Physical Attributes

Antenna Type	Telescopic rods
Recommended Placement	Indoor tabletop
