

Indoor VHF/UHF TV Antenna with Amplifier

This indoor TV antenna is designed for receiving VHF and UHF signals for over-the-air television broadcasts. It features adjustable dipoles for VHF reception, a loop antenna for UHF reception, and an amplifier with adjustable gain to boost weak signals.

Product Overview

High-Performance Indoor Reception

This indoor TV antenna is engineered to deliver reliable VHF and UHF signal reception for over-the-air television broadcasts. It features an integrated adjustable amplifier to boost weak signals, making it an ideal solution for homes, apartments, or offices where outdoor antenna installation is not feasible. The combination of adjustable dipoles and a dedicated UHF loop ensures versatile performance for a wide range of broadcast frequencies.

Technical Specifications

Build Materials

- Plastic housing
- Metal components

Frequency Bands

VHF, UHF

Signal Control

Adjustable Gain

Connectivity and Power

Connection Interface

Coaxial cable

Power Input

AC adapter

Operational Features

Controls and Indicators

Tuning knob • Power indicator • Adjustable dipoles
