

Induction Cooktop with Ceramic Glass Surface

This kitchen appliance uses electromagnetic induction to directly heat cookware. It features a black ceramic glass surface and a digital control panel for adjusting power and cooking times.

Overview

Professional Induction Cooktop

This high-performance induction cooktop is designed for efficient, precise, and safe cooking in professional environments. Featuring a high-quality ceramic glass surface and a durable all-metal frame, it offers rapid heating capabilities and reliable temperature control. With built-in safety features like fault self-diagnosis and automatic overheating protection, it is an ideal solution for commercial kitchens requiring consistent performance and ease of maintenance.

Technical Specifications

Power Rating	2500 W
Input Voltage	220-240VAC 50/60Hz
Surface Material	Germany SCHOTT SERAN ceramic glass
Frame Design	All metal frame

Features & Safety

Safety Protections

- Fault self-diagnosis function
- Automatic turn off (no operation)
- Surface overheating protection
- Inner side overheating protection

Control Modes	Power Control, Temperature Control
