

Industrial Abrasive and Grinding Machine

This industrial machine is designed for abrasive and grinding processes. It features stainless steel construction, a conical hopper, and a precision grinding mechanism.

Overview

Industrial-Grade Processing Solution

This industrial-grade abrasive and grinding machine is engineered for high-volume processing environments. Featuring durable stainless steel construction, it ensures both longevity and hygiene standards. The system is designed for continuous operation, incorporating a conical hopper and precision grinding mechanisms to deliver uniform particle sizes across batches.

Technical Specifications

Construction Material	Stainless Steel
Feeding Mechanism	Conical Hopper
Operational Features	Continuous Feeding, Precision Grinding, Ventilated Base

Applications

Suitable Industries

Food Processing • Chemical • Pharmaceutical
