

Industrial Acid Gas Scrubber System

This industrial acid gas scrubber system removes harmful acid gases from industrial exhaust streams. It is constructed from corrosion-resistant materials and engineered for durability and efficient gas treatment.

Product Overview

Industrial Acid Gas Scrubber System

This industrial acid gas scrubber system is engineered for effective air pollution control in demanding environments. It utilizes a two-stage spraying process designed to meet national gas emission standards, ensuring compliance and environmental safety. The system features a robust, corrosion-resistant construction and a PLC-based control system for automated dosing, pH adjustment, and pressure management.

System Capabilities

Customization Features

- Custom tower size
- Adjustable extractor volume capacity

Spraying Stages

2 stages

Control & Automation

Control System

PLC-based automated control

Automation Functions

Automatic Dosing, pH Value Adjustment, Automatic Pressure Control

Construction

Material Properties

Corrosion Resistant
