

Industrial Agitator Mixing Tank

This industrial machinery appears to be a mixing or blending unit, possibly for liquids or powders. The unit is mounted on a wheeled platform for mobility.

Product Overview

Industrial Agitator Mixing Tank

This industrial mixing unit is engineered for efficient blending of liquids or powders in demanding production environments. Featuring a cylindrical tank design with a conical bottom, it ensures optimal material discharge and processing consistency. Mounted on a mobile wheeled platform, this unit offers flexibility for integration into various production workflows, while its robust dual-motor drive system provides the necessary power for reliable agitation.

Technical Specifications

Key Components

- Integrated wheeled platform
- Conical discharge base
- Primary agitator assembly
- Secondary pump/mixing element

Tank Configuration	Cylindrical with conical bottom
Mobility	Yes
Drive System	Top-mounted agitator motor, Belt drive system, Bottom-mounted secondary drive
