

Industrial Air Blower with Cylindrical Impeller

This air blower is designed for industrial applications. It features a cylindrical impeller with multiple blades to ensure efficient air movement, providing high airflow and pressure for ventilation and cooling.

Product Overview

Industrial Performance

This high-performance air blower is engineered specifically for demanding industrial environments. Equipped with a robust cylindrical impeller featuring multi-blade architecture, it ensures efficient air movement for a wide range of applications. It is an ideal solution for integration into compressors and general machinery requiring consistent ventilation and cooling performance.

Technical Specifications

Performance Capabilities

100 High

Airflow Capability

100 High

Pressure Output

Impeller Design

Cylindrical with multi-blade configuration

Suitable Applications

Industrial Ventilation, Compressor Systems, General Machinery, Cooling Systems
