

Industrial Air Compressor

This industrial air compressor is designed for demanding applications. It features a high-efficiency motor, durable pump, and large-capacity tank for extended operation.

Overview

Industrial Air Compressor JWA20

The JWA20 is a robust industrial air compressor engineered for demanding professional applications. It features a high-efficiency motor and a durable pump paired with a large-capacity tank to ensure extended operation times. Designed for reliability and safety, this unit includes essential protective mechanisms such as a pressure relief valve and thermal overload protection, making it an ideal choice for workshops, garages, and construction sites.

Key Features

Recommended Applications

Workshops • Garages • Construction Sites

Safety Features

Pressure Relief Valve, Thermal Overload Protection
