

Industrial Air Compressor with Horizontal Tank

This industrial air compressor features a horizontal tank and a twin-cylinder pump driven by an electric motor. It is designed for heavy-duty applications requiring a consistent supply of compressed air and is mounted on wheels for portability.

Overview

Industrial Performance

This industrial air compressor is engineered for heavy-duty applications that demand a consistent and reliable supply of compressed air. Featuring a robust horizontal tank design and a high-performance twin-cylinder pump, it is built to handle rigorous operational requirements. Mounted on wheels for enhanced portability, this unit provides the flexibility needed for dynamic work environments while maintaining stability during operation.

Technical Specifications

Tank Orientation	Horizontal
Pump Configuration	Twin-cylinder
Mobility Features	Wheeled, Portable, Industrial Grade
