

Industrial Air Separation System with Rotary Compressor

This industrial air separation system features a rotary compressor and control panel. It is designed for air purification, filtration, and water processing in industrial settings that require high-quality compressed air.

Product Overview

Industrial Air Separation Solution

This industrial air separation system utilizes a high-efficiency rotary compressor to deliver reliable air purification and filtration. Engineered for demanding industrial environments, the unit ensures high-quality compressed air production and water processing capabilities. Designed for longevity and consistent performance, it serves as a robust solution for large-scale air management applications.

Technical Specifications

Model Identifier	SCZ-5AA
Compressor Technology	Rotary

Key Features

System Capabilities

- Air Purification
- Air Filtration
- Water Processing

Industrial Standards	Industrial Grade, Compressed Air System
