

Industrial Air Treatment System

This air treatment system is designed for industrial applications. Its modular design allows for easy integration into existing machinery setups, ensuring efficient air purification and conditioning.

Overview

Industrial Air Treatment System

This industrial air treatment system is designed for high-performance air purification and conditioning in demanding environments. Featuring a robust, modular, and cube-shaped design, it integrates seamlessly into existing machinery setups. The unit includes a ventilated enclosure and an integrated control panel to ensure efficient operation across various general machinery applications.

Physical Characteristics

Form Factor	Cube-shaped
Design Features	Modular Design, Ventilated Enclosure, Integrated Control Panel

Application

Suitable Applications

- General machinery integration
- Air purification
- Air conditioning
