

Industrial Alternator FDR7 Series

This industrial alternator is engineered for dependable performance in a variety of demanding settings. It features a durable construction and efficient cooling system, ensuring stable operation and extended service life.

Product Overview

Industrial Power Generation Solution

The FDR7 Series Low Voltage Alternator is engineered for robust industrial performance, offering consistent power output for both prime and standby applications. Designed with durability in mind, the unit features an integrated cooling fan with a protective grill to ensure optimal operating temperatures and a prolonged service life. This series has been successfully deployed in demanding international markets, demonstrating reliability in specialized industrial sectors.

Performance Metrics

Power Capacity

1330 kVA

Min Power (kVA)

2375 kVA

Max Power (kVA)

1064 kW

Min Power (kW)

1900 kW

Max Power (kW)

Supported Frequencies

50Hz, 60Hz

Technical Specifications

Design & Construction

- Robust industrial construction
- Integrated cooling fan system
- Protective fan grill
- Engineered for low maintenance

Application Suitability

Prime Power • Standby Power • Industrial Use
