

Industrial Angle Valve for Fluid Control

This angle valve is suitable for opening and closing on ship pipelines, offering simple and easy operation. Designed for fluid control, it features a robust cast body and a handwheel for manual operation.

Product Overview

Industrial Fluid Control Solution

This industrial angle valve is engineered for reliable opening and closing operations within ship pipeline systems. Designed to withstand demanding industrial environments, the valve ensures efficient flow regulation and secure shut-off capabilities. It is available in a wide range of diameters and material compositions to suit diverse piping requirements.

Technical Specifications

Diameter Range	50A to 450A
Available Materials	Cast Iron, Cast Steel, Bronze, Brass, Stainless Steel
Primary Application	Ship Pipelines

Design Features

Key Features

- Robust cast body construction
- Manual handwheel operation
- Flanged connections for secure integration
- High pressure and temperature resistance
