

Industrial Ball Mill for Material Grinding

This industrial ball mill is used for grinding materials into extremely fine powder. The mill has a cylindrical shape with a perforated interior and is mounted on a heavy-duty transport trailer for relocation.

Product Overview

Industrial Ball Mill Solution

This large industrial ball mill is engineered for high-volume grinding of materials into extremely fine powders. Constructed from heavy-gauge steel, it is designed for durability and consistent performance in demanding processing environments. The unit features a cylindrical design with a perforated interior for efficient material handling and is mounted on a heavy-duty transport trailer for flexible relocation.

Technical Specifications

Design Features

- Cylindrical body
- Perforated interior
- Heavy-duty chassis

Condition

New/Refurbished

Construction Material

Heavy-gauge steel

Primary Application

High-volume material grinding

Mobility

Yes

Transport Method

Mounted on heavy-duty transport trailer
