

Industrial Beer Production Engineering Project

This is an industrial beer production engineering project. The project is designed for a production capacity of 200,000 tons per year.

Project Overview

Industrial Beer Production Engineering

This industrial beer production engineering project encompasses the full lifecycle of facility development, including engineering design, equipment procurement, construction, and system commissioning. The project was successfully completed and accepted into production in April 2004. It represents a comprehensive turnkey solution for industrial-scale brewing operations.

Completion Date	April 2004
-----------------	------------

Compliance and Incentives

Import/Duty Status	Yes
Policy Compliance	State Economic and Trade Commission Key Technical Renovation Item

Service Scope

Services Included

- Engineering Design
- Equipment Procurement
- Construction
- Commissioning
- Personnel Training
