

Industrial Butterfly Valve

This industrial butterfly valve features a circular disc for precise flow regulation. Designed for heavy-duty applications, it is suitable for water treatment, chemical processing, and power generation.

Overview

Industrial Flow Control Solution

This industrial butterfly valve is engineered for heavy-duty fluid and gas handling applications, offering reliable performance in demanding environments. Featuring a robust construction with a distinct green-painted body and a red-painted disc, it ensures durability and high visibility. The integrated lever-actuated mechanism allows for precise flow control, while the flanged body design facilitates straightforward installation into existing piping systems.

Design & Construction

Valve Type	Butterfly Valve
Actuation	Lever-actuated
Installation Style	Flanged

Applications

Compatible Media

- Liquids
- Gases

Suitable Industries	Water Treatment, Chemical Processing, Power Generation
