

Industrial Butterfly Valve

This butterfly valve is designed for flow control in pipelines. It features robust construction for durability and reliable performance in demanding applications.

Product Overview

Industrial Flow Control Solution

This industrial butterfly valve is engineered for precise flow control in demanding pipeline applications. Featuring a robust circular body construction and a distinct red disc, it offers reliable performance and long-term durability. Designed to handle various fluids and operating conditions, this valve is an essential component for maintaining efficiency in industrial piping systems.

Design & Construction

Suitable Applications

- Pipeline flow control
- Demanding industrial environments
- Various fluid handling

Valve Type	Industrial Butterfly Valve
Key Components	Circular Body, Red Disc, Actuator
