

Industrial Centrifugal Pump

This centrifugal pump is engineered for a variety of industrial applications. Its design allows for handling fluids in processes such as water circulation, chemical transfer, and HVAC systems.

Product Overview

Industrial Centrifugal Pump

This robust centrifugal pump is engineered for demanding industrial environments, featuring a durable construction designed for longevity and corrosion resistance. Directly coupled to a standard induction motor, it ensures efficient power transmission and is suitable for continuous, reliable operation. With flanged connections, it integrates seamlessly into existing piping systems, making it an ideal solution for water circulation, chemical transfer, and HVAC processes.

Technical Specifications

Material	Cast iron
Motor Type	Standard induction motor
Connection Type	Flanged

Operational Features

Duty Cycle

Continuous Operation

Maintenance

Designed for easy maintenance and servicing

Applications

Suitable Applications

- Water circulation
- Chemical transfer
- HVAC systems
