

Industrial Centrifugal Pump

High-efficiency centrifugal pump designed for various industrial applications. Constructed with durable materials for longevity and reliability.

Overview

Industrial Centrifugal Pump

This high-efficiency centrifugal pump is engineered for demanding industrial fluid transfer applications. Built with durable materials, it ensures long-term reliability and consistent performance in various operational environments. The unit features an optimized impeller design and a robust 3-phase induction motor, making it suitable for pumping clean or slightly contaminated fluids while maintaining high efficiency.

Performance

Fluid Compatibility

- Clean fluids
- Slightly contaminated fluids

Motor Type	3-Phase Induction Motor
